CHIOMA VANESSA EGWUIBE

Cloud & DevOps Engineer | AWS Certified | Terraform | Kubernetes | CI/CD | GitOps
Hertfordshire, United Kingdom · Right to work in the UK, no sponsorship required
+44 7350 167667 · chiomaegwuibe@gmail.com · linkedin.com/in/chioma-egwuibe · github.com/chiomanwanedo · devopsbychioma.co.uk

PROFESSIONAL SUMMARY

AWS-certified cloud and DevOps practitioner with hands-on, project-based experience across AWS and Azure. Built five production-style projects covering Terraform, ECS/EKS/AKS, CI/CD and GitOps, and observability, each documented publicly with architecture diagrams and validation evidence. Brings ten years of prior experience in operations coordination and stakeholder management, directly transferable to incident communication, documentation discipline and structured escalation. Seeking a Junior/Associate DevOps Engineer, Cloud Engineer, or Associate Platform Engineer role.

TECHNICAL SKILLS

Cloud: AWS (EC2, S3, RDS, VPC, IAM, Lambda, EventBridge, ECS, EKS, ECR, ALB, CodePipeline, CodeBuild, CodeDeploy, CloudWatch, Secrets Manager) · Azure (AKS, ACR, Azure DevOps)
IaC & Automation: Terraform, CloudFormation, Boto3, Bash, Python, Ansible, YAML, Git
CI/CD & GitOps: GitHub Actions, Jenkins, GitLab CI/CD, Azure Pipelines, AWS CodePipeline/CodeBuild/CodeDeploy, Argo CD
Containers & Orchestration: Docker, Docker Compose, Kubernetes, AKS, EKS, K3s, Helm
Monitoring & Security: CloudWatch, Prometheus, Grafana, SonarQube (SAST), Trivy, IAM least privilege, Secrets Manager
Networking & OS: VPCs, subnets, route tables, NAT/internet gateways, load balancers, DNS, Route 53, Linux, Nginx
AI Integration: Anthropic Claude API (event-driven incident triage)

PROJECTS

AWS Three-Tier Web Application
Terraform · ECS Fargate · Aurora PostgreSQL · ElastiCache Redis · ALB · Cloudflare · GitHub Actions · CloudWatch · Grafana · Lambda · Claude API · github.com/chiomanwanedo/aws-three-tier-terraform
- Provisioned a production-style three-tier AWS architecture as reusable Terraform modules, covering VPC, ECS Fargate, Aurora PostgreSQL and ElastiCache Redis with a cache-aside pattern.
- Removed rollback risk from mutable image tags by rebuilding the CI/CD pipeline to inject the commit SHA into each ECS task definition revision, so every deployment is now traceable and reversible to the exact code that shipped.
- Eliminated standing master-database access from the running application by creating a least-privilege database user, moving its credentials to a dedicated Secrets Manager secret, and scoping IAM so the ECS execution role can no longer read the master credential.
- Secured the application end-to-end with ACM-issued TLS on the ALB, Cloudflare as CDN and WAF (Full Strict SSL, 3 custom WAF rules), and Secrets Manager replacing hardcoded credentials in ECS task definitions.
- Implemented monitoring across 3 CloudWatch alarms (ECS CPU, ALB unhealthy hosts, Aurora connections) with SNS alerting and a Grafana Cloud dashboard using cross-account IAM with confused-deputy protection.
- Built an AI-driven incident triage layer using a Lambda function that reads CloudWatch alarm payloads, calls the Claude API to generate a diagnosis, and posts it to Slack — giving an initial read on an incident before manually opening a dashboard.

Azure AKS CI/CD & GitOps Pipeline
Azure DevOps · ACR · AKS · Docker · Kubernetes · Argo CD
- Built an end-to-end delivery pipeline from GitHub source to AKS deployment, separating CI (Azure DevOps: build, tag, push to ACR) from CD (Argo CD auto-sync), so a build failure can never trigger a bad deployment.
- Validated the pipeline by shipping a live version change and confirming automatic rollout to AKS with zero manual kubectl steps.

AWS EKS Hotstar Clone DevOps Pipeline
Terraform · EKS · Jenkins · ECR · Argo CD · SonarQube · Trivy · Prometheus · Grafana
- Provisioned VPC, IAM roles, EKS cluster and ECR repository with Terraform, and configured Argo CD auto-sync for Git-driven deployments.
- Removed unreviewed code and vulnerable images from reaching production by building a Jenkins pipeline that gates every deployment behind SonarQube static analysis and a Trivy image scan before the GitOps handoff.

AWS ECS Application Deployment
ECS EC2 · ECR · ALB · Target Groups · IAM · CloudWatch
- Deployed a containerised application to ECS behind an internet-facing ALB with health-checked target groups routing traffic only to healthy containers.
- Diagnosed and resolved real deployment failures (port mismatch, unhealthy targets) and documented cleanup steps to prevent ongoing AWS charges after teardown.

AWS Native CI/CD for Full-Stack Application
CodePipeline · CodeBuild · CodeDeploy · EC2 · React · Node.js · MySQL · Nginx
- Built a fully automated CI/CD workflow for a React/Node.js/MySQL application, using CodeDeploy appspec hooks to deploy artefacts to EC2 and restart services with no manual intervention.

PROFESSIONAL EXPERIENCE

Cloud & DevOps Engineering Trainee — Aug 2024 – Apr 2026 | UK
Cloudboosta Academy
- Completed structured, hands-on training across AWS/Azure foundations, Linux, networking, Terraform, CI/CD, Docker, Kubernetes, GitOps and monitoring.
- Facilitates live Kubernetes and cloud lab sessions as a volunteer for junior engineers (4 sessions, around 20 learners so far), sharpening documentation, communication, and the ability to explain technical concepts clearly to others.

Operations & Administration Coordinator — Aug 2017 – Jul 2025 | Bida, Nigeria
The Heritage School
- Coordinated information flow across staff, students and parents, resolving competing priorities under time pressure — directly transferable to incident communication and stakeholder updates in a technical team.
- Maintained structured digital records and reporting processes, improving accuracy and traceability, and designed a payment-logging system still in use after handover.
- Served concurrently as ICT Coordinator, supporting school systems and digital record-keeping.

Founder & Operations Manager — Jan 2013 – Feb 2016
CeeProteins
- Founded and ran a poultry business, managing daily operations and workflow across a team of two staff and an average of 200 birds per batch, building operational ownership and structured problem-solving habits.
- Served over 50 clients, handling orders and customer communication, and managed supplier relationships.
- Kept records of daily operations.
- Developed the business's own poultry feed in-house.

EDUCATION

BSc Microbiology — Ajayi Crowther University, Nigeria · 2011
Cloud & DevOps Engineering Bootcamp — Cloudboosta Academy · Aug 2024 – Apr 2026 · AWS, Terraform, Docker, Kubernetes, CI/CD, monitoring

CERTIFICATIONS & PORTFOLIO

AWS Certified Solutions Architect – Associate (2025)
Portfolio: devopsbychioma.co.uk — architecture diagrams, implementation write-ups and validation evidence for all projects listed above.
